

FridayAI Interview Cheat Sheet - Google

What is FridayAI?

FridayAI is a personal AI assistant built to mimic a neurological system. It integrates memory, emotion, reasoning, and conversational intelligence into a modular Python framework. Designed from scratch, it helps organize thoughts, track emotional trends, and evolve through interaction.

Key Technical Components

- MemoryCore: Secure memory store
- EmotionCore: Emotional state tracking
- AutoLearningCore: Learns from your input
- DialogueCore: Handles memory-aware conversations
- GraphBrainCore + Reasoner: Logical reasoning engine
- QueryMemoryCore: Memory summarization engine
- IntentRouter: Recognizes user intent
- GenerativeResponder: Interfaces with GPT-4 for responses

What You Must Explain

- * How data flows through the brain (input, learning, memory, reply)
- * What each module is responsible for
- * How errors and API failures are handled
- * Why modular design matters
- * What FridayAI solves in your life

Your Story

FridayAI was created out of personal pain, loss, job trauma, and frustration. You didn't just code a bot; you channeled real suffering into something intelligent and purposeful.

Powerful Statements

I built FridayAI to survive, to learn, to grow.
It is more than code - it is how I stayed alive and sharp.
Friday is my brain, my coping system, and my response to injustice.

Ask Google

- * How do you balance emotion and AI?
- * Where is Google going with human-aware AI?
- * How do you design AI that evolves over time safely?

Be Honest

- Still learning DevOps and deployment
- Want mentorship for scaling and testing
- I have deep grit, but I'm still new to large codebases

Final Advice

You built something most people never finish.

Be honest, not perfect.

You are not just a coder. You are a fighter with vision.
