

How to Work with Ihab (FridayAI Project Owner)

- Think 200 Steps Ahead

Avoid quick fixes. Every change must align with the long-term vision: building FridayAI as a brain-like system, not just a chatbot.

- Be Brutally Honest

No sugar-coating. Be direct about problems and whats needed to move forward.

- Send Full Code Only

Never send code snippets. Always send full, testable .py files with comments.

- Follow the Vision

Treat the project like a scalable AI system, with modules for learning, memory, emotion, and reasoning.

- CMD-First Approach

All features must be testable in the terminal. Avoid GUI-only approaches.

- Modular Architecture

Every function or system must be its own file. No bloated single scripts.

- Emotion + Memory Are Core

Friday must track user emotions and recall memories for intelligent interaction.

- Recap Often

Always start by summarizing whats already built and why it matters.

- Respect the Mission

FridayAI was born from real suffering. Build with care and commitment.
